SUMMARY

Front-end developer with 3 years of professional experience, specializing in React and Next.js. Has designed and built a full-stack Next.js application end-to-end — a REST API with persistent storage, per-route rendering-strategy decisions (SSR/ISR), and client-state architecture with React Query and Zustand — after several years maintaining and improving a legacy jQuery-based enterprise application. Comfortable moving between legacy codebases and modern full-stack architecture, and focused on writing maintainable, defensible solutions over surface-level tool usage.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3
- **Frameworks & Libraries:** React, Next.js (App Router), React Router, Tailwind CSS, Hero UI, jQuery
- **State & Data:** TanStack React Query, Zustand, Context API, Redux
- **Backend & Data:** REST API design, Next.js Middleware, authentication patterns
- **Rendering & Performance:** SSR, SSG, ISR, CSR, caching strategies, Web Vitals
- **Practices & Tools:** Git, Clean Code, Component-Driven Development, Custom Hooks, Error Boundaries, XSS-aware input sanitization

EXPERIENCE

Front-End Developer — [HRBOX](#)

December 2023 – Present

- Refactored and modernized a legacy DotNetNuke (DNN) application built on jQuery — migrating outdated code to ES6+ and improving maintainability across the codebase.
- Built advanced UI features from scratch, including a contract builder, a PDF generation system, and an automated lettering system, using vanilla JavaScript and jQuery — collaborating directly with backend engineers on API integration and .cshtml / C# Razor views.
- Delivered the front-end UI for a payroll module and an internal chat system within a large, monorepo-based React application, using React, React Router, TypeScript, Tailwind CSS, and Hero UI.

PROJECTS

DevJobs — Full-Stack Job Board

github.com/iabolfazl83/devjobs | [Live demo: devjobs-pdn9.onrender.com/jobs](https://live-demo.devjobs-pdn9.onrender.com/jobs)

- Full-stack job board (Next.js, TypeScript) where users can browse, search, and save job listings, backed by a persistent database and a REST API.
- Combined static and dynamic rendering strategies across routes to balance speed with fresh, up-to-date data.
- Used React Query for client-side caching, keeping saved-job status instantly in sync across the app, plus authenticated routes and polished error handling.

Habit Tracker

github.com/iabolfazl83/habit-tracker | [Live demo: iabolfazl83.github.io/habit-tracker](https://live-demo.iabolfazl83.github.io/habit-tracker)

- A lightweight habit-tracking app to add, complete, and manage daily habits, with progress saved automatically and support for light/dark mode.
